DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 1, 9, 13, and 21 refer to a phase detector and recite the limitation "a zero output signal corresponds to a nonzero phase difference between first (reference) and second (feedback) signals". However, this limitation was not described in the specification in a such a way to enable one skilled in the art to which it pertains to make and/or use the phase detector to produce "a zero output signal corresponds to a nonzero phase difference between first (reference) and second (feedback) signals". The applicant has referenced Fig. 11 and page 11, lines 3-14 of the application as further explanation of this limitation, but the it is still unclear to the examiner how this limitation was derived from the specification.
